

Data based on a recent webinar titled:

A Multi-Modal Approach on the use of Clinical Aromatherapy

J.D. Buchert

MSN(s), M.Ed., MS, RN, CNOR, CPHQ

3 Clinical Studies Using Elequil Aromatabs® were Conducted at an Urban-Based, Safety-Net Community Hospital Focused on a Multi-Modal Approach using Clinical Aromatherapy for Staff Wellness and Patient Care Outcomes¹:

Code Purple

The Parkland "Code Purple" aromatherapy study aims to focus on nurses experiencing mental or emotional stressors.

Pain & Anxiety

The purpose of this study was to evaluate the effectiveness of aromatherapy as an alternative and/or complement treatment for pain and anxiety in the acute care setting at Parkland Health and Hospital System.

Nausea & Vomiting

The purpose of this study was to assess the effectiveness of aromatherapy as an alternative and/or complement treatment in the hospital and ambulatory procedural setting.

Elequil Aromatabs® Aromatherapy Proven to Help Patients and Staff

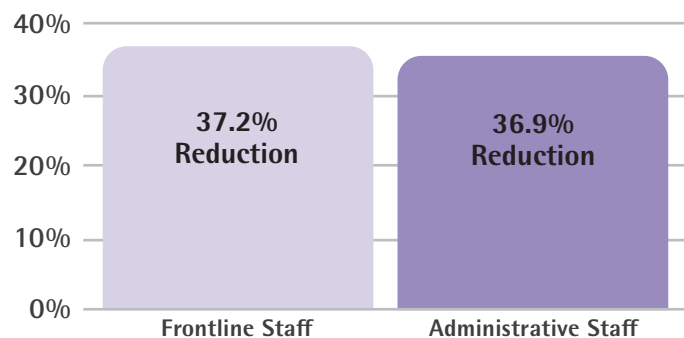

Elequil Aromatabs® is a non-pharmacological alternative that can benefit the well-being of the workforce and patient populations in the inpatient and outpatient settings. It is a cost-saving, cost effective, and proven best-practice nursing intervention tool to help with managing symptoms.

Code Purple:

Elequil Aromatabs® Aromatherapy Proven to Help Staff Stress

- 38.6% reduction in work-related stress
- 91% of staff recommend aromatherapy to coworkers for managing stress
- 84% of staff have positive experience using aromatherapy

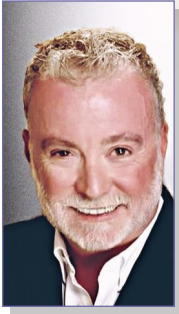

Reduction In Staff Stress

Reduced Staff Stress Increases Quality of Patient Care

The use of Elequil Aromatabs® aromatherapy reduced frontline staff stress by 37.2%, and administration stress levels by 36.9%. A motivation for self-care can increase the likeliness of staff retention and happier staff. Increase self-care for healthcare providers, and create an improved patient experience.

Data based on a recent webinar titled:

A Multi-Modal Approach on the use of Clinical Aromatherapy

J.D. Buchert

MSN(s), M.Ed., MS, RN, CNOR, CPHQ

Pain and Anxiety:

Outcomes Based on JD Buchert's Clinical Studies¹ Using Elequil Aromatabs®:

- 90% of patients stated that aromatherapy made them feel better
- 86% of patients stated aromatherapy helped them relax
- 80% of patients stated aromatherapy helped their pain
- 37% of patients reported reduction in pain scores

Reduce Opioid Use and Pain Scores

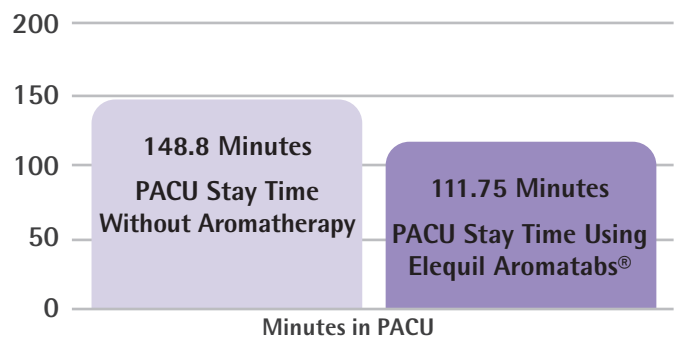

When combined with Elequil Aromatabs®, patient's first day pain scores were 33% lower than with opioids alone. 12 hours after discharge, patients that continued using Elequil Aromatabs®, reported pain scores lower than the controlled group.

Nausea and Vomiting:

Save \$3,000 Per Patient with Reduced Recovery Time

A 37.05 minute reduction in PACU recovery time was achieved using Elequil Aromatabs®. The hospital-reported PACU cost of \$85/minute savings per patient is over \$3,000.

Reduction In PACU Stay Time (minutes)

Adjunct Therapy with Antiemetics Usage

The use of Elequil Aromatabs® can be used as an adjunct therapy to antiemetics who underwent monitored anesthesia with positive results to reduce queasiness.
